PROFESSIONAL SUMMARY

Results-driven DevOps Engineer and Infrastructure Professional with expertise in AWS, Azure, Docker, Kubernetes, CI/CD automation, Linux administration, virtualization, and cloud-native deployments. Experienced in building scalable cloud infrastructure, automating deployments, implementing monitoring solutions, and maintaining high availability production environments. Strong background in Python, SQL, Shell scripting, Terraform, Jenkins, and infrastructure automation.

TECHNICAL SKILLS

Cloud Platforms	AWS, Azure, GCP
DevOps Tools	Docker, Kubernetes, Jenkins, Terraform, Ansible, Chef, Puppet
Programming	Python, SQL, JavaScript, Bash, PowerShell
Monitoring	Prometheus, Grafana, ELK Stack, CloudWatch, Zabbix
Operating Systems	Windows Server 2016/2019/2022, Linux (RHEL, Ubuntu, CentOS)
Virtualization	VMware ESXi, Hyper-V, vCenter
Networking	DNS, DHCP, VPN, Firewalls, LAN/WAN, Load Balancing

PROFESSIONAL EXPERIENCE

IT Programmer | Data Center Network Engineer | RITES Ltd, Gurugram (Jan 2025 – Oct 2025)

- Installed and managed Windows/Linux servers supporting 200+ enterprise workloads with 99.9% uptime.
- Administered VMware ESXi and Hyper-V virtualization infrastructure hosting 100+ virtual machines.
- Built CI/CD pipelines using Jenkins and GitHub, reducing deployment time by 60%.
- Automated AWS infrastructure provisioning using Terraform and CloudFormation, decreasing setup time by 70%.
- Managed AWS services including EC2, S3, IAM, Lambda, Route53, CloudWatch, SNS, and RDS.
- Implemented Docker containerization and Kubernetes orchestration for scalable application deployments.
- Configured monitoring dashboards using Grafana and Prometheus, reducing incident response time by 40%.
- Maintained SAN/NAS storage systems and improved backup recovery reliability by 35%.
- Automated system administration tasks using Python, Bash, and PowerShell scripting.
- Collaborated with infrastructure and networking teams to maintain high availability production environments.

Automation Enablement | AuthBridge, Gurugram (Oct 2024 – Dec 2024)

- Developed SQL-based automation workflows processing 50K+ operational records daily.
- Automated recurring reporting tasks reducing manual processing effort by 45%.
- Performed data cleaning and transformation using SQL, Excel, and Python automation scripts.
- Built analytical reports and dashboards to improve operational visibility and business decision-making.
- Improved reporting accuracy by 30% through structured validation and data quality checks.

DEVOPS PROJECTS

1. CI/CD Pipeline Automation using Jenkins & Docker

- Designed automated CI/CD pipelines for Java and Python applications using Jenkins and GitHub.

- Integrated Docker-based build environments reducing deployment failures by 50%.
- Configured automated testing and deployment workflows across Linux environments.
- Reduced application release cycle from 3 hours to 45 minutes.
- Implemented Git branching and version control strategies for production releases.
- Improved deployment consistency and rollback efficiency across multiple environments.

2. Kubernetes-Based Microservices Deployment

- Containerized enterprise applications using Docker and deployed workloads on Kubernetes clusters.
- Configured Helm charts for scalable and repeatable Kubernetes deployments.
- Implemented auto-scaling and load balancing improving application availability by 35%.
- Reduced infrastructure resource utilization by 25% through optimized container management.
- Monitored Kubernetes workloads using Prometheus and Grafana dashboards.
- Improved deployment reliability and fault tolerance for production applications.

3. AWS Infrastructure Automation using Terraform

- Provisioned AWS infrastructure including EC2, VPC, S3, IAM, and RDS using Terraform.
- Created reusable Terraform modules reducing provisioning time by 70%.
- Implemented Infrastructure as Code (IaC) for cloud deployment standardization.
- Configured secure networking, subnets, and security groups for production workloads.
- Automated environment deployment processes for development and testing teams.
- Improved cloud infrastructure consistency and operational efficiency.

4. Monitoring & Logging Platform Implementation

- Implemented centralized monitoring using Prometheus, Grafana, and ELK Stack.
- Configured alerting systems reducing incident response time by 40%.
- Built real-time dashboards for infrastructure health and application metrics.
- Integrated AWS CloudWatch logs for cloud-native monitoring visibility.
- Improved troubleshooting efficiency through centralized log analytics.
- Enabled proactive monitoring across production and staging environments.

5. Linux Server Monitoring & Alert Automation

- Developed automated Linux server monitoring scripts using Python and Bash.
- Tracked CPU, memory, disk utilization, and service uptime metrics.
- Configured automated alerts reducing server downtime incidents by 30%.
- Scheduled cron-based monitoring tasks for continuous health tracking.
- Generated performance reports for infrastructure optimization planning.
- Improved operational reliability through proactive alert management.

6. End-to-End Web Application Deployment on AWS

- Hosted scalable web applications on AWS cloud infrastructure using EC2 and S3.
- Integrated Route53 and Load Balancers for high availability application hosting.
- Implemented Docker-based deployment workflows improving scalability.

- Configured RDS database services and backup strategies for production workloads.
- Improved application availability and response performance by 35%.
- Implemented secure cloud deployment and access management practices.

CERTIFICATIONS

- NLP – Coursera
- JavaScript – Udemy
- Django – Cipher Schools
- Python with Data Science – Udemy
- ML using Python – Great Learning

EDUCATION

Lovely Professional University (LPU), Punjab

B.Tech in Computer Science & Engineering | CGPA: 7.2

RTC High School – 78.6%

DAV Public School – CGPA: 10

ADDITIONAL INFORMATION

- Strong understanding of DevOps lifecycle, CI/CD automation, Infrastructure as Code (IaC), and cloud-native deployments.
- Experience in AWS and Azure cloud migration, automation, monitoring, and infrastructure optimization.
- Hands-on expertise in Docker, Kubernetes, Jenkins, Terraform, Linux administration, and production support.
- Excellent analytical thinking, troubleshooting, collaboration, and problem-solving skills.
